**AMENDMENTS TO THE CLAIMS**

Kindly amend claims 1, 7, 22-23, and 26 as shown in the following listing of claims. The listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims**

1. (Currently Amended) An apparatus for performing cryptographic operations, comprising:  
  
fetch logic, disposed within a microprocessor, configured to receive a  
cryptographic instruction, ~~received by a microprocessor~~ as part of an instruction flow executing on said microprocessor, wherein said cryptographic instruction prescribes one of the cryptographic operations, and wherein said cryptographic instruction prescribes that a provided cryptographic key be expanded into a corresponding key schedule for employment during execution of said one of the cryptographic operations;  
  
keygen logic, disposed within said microprocessor and operatively coupled to said cryptographic instruction, configured to direct said microprocessor to expand said provided cryptographic key into said corresponding key schedule; and  
  
execution logic, disposed within said microprocessor and operatively coupled to said keygen logic, configured to expand said provided cryptographic key into said corresponding key schedule.
2. (Original) The apparatus as recited in claim 1, wherein said one of the cryptographic operations further comprises:  
  
an encryption operation, said encryption operation comprising encryption of a plurality of plaintext blocks to generate a corresponding plurality of ciphertext blocks.

Application No. 10826632 (Docket: CNTR.2230)  
37 CFR 1.111 Amendment dated 10/19/2007  
Reply to Office Action of 10/18/2007

3. (Original) The apparatus as recited in claim 1, wherein said one of the cryptographic operations further comprises:  
  
a decryption operation, said decryption operation comprising decryption of a plurality of ciphertext blocks to generate a corresponding plurality of plaintext blocks.
4. (Original) The apparatus as recited in claim 1, wherein said provided cryptographic key is stored in memory.
5. (Original) The apparatus as recited in claim 1, wherein said corresponding key schedule comprises an expanded key schedule according to the Advanced Encryption Standard (AES) algorithm.
6. (Original) The apparatus as recited in claim 1, wherein said keygen logic is configured to interpret a key generation field within a control word which is referenced by said cryptographic instruction.
7. (Previously Presented) The apparatus as recited in claim 1, wherein said cryptographic instruction is prescribed according to the instruction format for execution on an x86-compatible microprocessor.
8. (Original) The apparatus as recited in claim 1, wherein said cryptographic instruction implicitly references a plurality of registers within said computing device.
9. (Original) The apparatus as recited in claim 8, wherein said plurality of registers comprises:  
  
a first register, wherein contents of said first register comprise a first pointer to a first memory address, said first memory address specifying a first location in memory for access of said plurality of input text blocks upon which said one of the cryptographic operations is to be accomplished.

Application No. 10826632 (Docket: CNTR.2230)  
37 CFR 1.111 Amendment dated 10/19/2007  
Reply to Office Action of 10/18/2007

10. (Previously Presented) The apparatus as recited in claim 8, wherein said plurality of registers comprises:  
  
a first register, wherein contents of said first register comprise a first pointer to a first memory address, said first memory address specifying a first location in memory for storage of a corresponding plurality of output text blocks, said corresponding plurality of output text blocks being generated as a result of accomplishing said one of the cryptographic operations upon a plurality of input text blocks.
11. (Original) The apparatus as recited in claim 8, wherein said plurality of registers comprises:  
  
a first register, wherein contents of said first register indicate a number of text blocks within a plurality of input text blocks.
12. (Original) The apparatus as recited in claim 8, wherein said plurality of registers comprises:  
  
a first register, wherein contents of said first register comprise a first pointer to a first memory address, said first memory address specifying a first location in memory for access of cryptographic key data for use in accomplishing said one of the cryptographic operations.
13. (Original) The apparatus as recited in claim 12, wherein said cryptographic key data comprises said provided cryptographic key.
14. (Previously Presented) The apparatus as recited in claim 8, wherein said plurality of registers comprises:  
  
a first register, wherein contents of said first register comprise a first pointer to a first memory address, said first memory address specifying a first location in memory, said first location comprising an initialization vector location, contents of said initialization vector location comprising an initialization vector or initialization vector equivalent for use in accomplishing said one of the cryptographic operations.

Application No. 10826632 (Docket: CNTR.2230)  
37 CFR 1.111 Amendment dated 10/19/2007  
Reply to Office Action of 10/18/2007

15. (Original) The apparatus as recited in claim 8, wherein said plurality of registers comprises:
- a first register, wherein contents of said first register comprise a first pointer to a first memory address, said first memory address specifying a first location in memory for access of a control word for use in accomplishing said one of the cryptographic operations, wherein said control word prescribes cryptographic parameters for said one of the cryptographic operations, and wherein said control word comprises:
- a keygen field, configured to specify that said provided cryptographic be expanded into said corresponding key schedule be employed during execution of said one of the cryptographic operations.
16. (Original) The apparatus as recited in claim 1, wherein said execution logic comprises:
- a cryptography unit, configured execute a plurality of cryptographic rounds on each of said plurality of input text blocks to generate a corresponding each of a plurality of output text blocks, wherein said plurality of cryptographic rounds are prescribed by a control word that is provided to said cryptography unit.
17. (Currently Amended) An apparatus for performing cryptographic operations, comprising:
- a cryptography unit within a microprocessor, configured to execute one of the cryptographic operations responsive to receipt by said microprocessor of a cryptographic instruction within an instruction flow that prescribes said one of the cryptographic operations, wherein said cryptographic instruction is fetched from memory by fetch logic in said microprocessor, and wherein said cryptographic instruction also prescribes that a cryptographic key be expanded into a corresponding key schedule to be employed when executing said one of the cryptographic operations; and

Application No. 10826632 (Docket: CNTR.2230)  
37 CFR 1.111 Amendment dated 10/19/2007  
Reply to Office Action of 10/18/2007

keygen logic, operatively coupled to said cryptography unit, configured to direct said microprocessor to perform said one of the cryptographic operations and to expand said cryptographic key into said corresponding key schedule.

18. (Original) The apparatus as recited in claim 17, wherein said cryptographic key is stored in memory.
19. (Original) The apparatus as recited in claim 17, wherein said corresponding key schedule comprises an expanded key schedule according to the Advanced Encryption Standard (AES) algorithm.
20. (Original) The apparatus as recited in claim 17, wherein said keygen logic is configured to interpret a key generation field within a control word which is referenced by said cryptographic instruction.
21. (Previously Presented) The apparatus as recited in claim 17, wherein said cryptographic instruction is prescribed according to the instruction format for execution on an x86-compatible microprocessor.
22. (Currently Amended) A method for performing cryptographic operations, the method comprising:  
  
within a microprocessor, receiving fetching a cryptographic instruction from memory that prescribes expansion of a cryptographic key into a corresponding key schedule for employment during execution of one of a plurality of cryptographic operations; and  
  
within the microprocessor, executing the cryptographic instruction and expanding the cryptographic key into the corresponding key schedule.
23. (Currently Amended) The method as recited in claim 22, wherein said receiving fetching comprises:  
  
via a field within a control word that is referenced by the cryptographic instruction, specifying expansion of the cryptographic key into the corresponding key schedule.

Application No. 10826632 (Docket: CNTR.2230)  
37 CFR 1.111 Amendment dated 10/19/2007  
Reply to Office Action of 10/18/2007

24. (Original) The method as recited in claim 22, wherein said expanding comprises:  
loading the cryptographic key from memory.
25. (Original) The method as recited in claim 22, wherein the corresponding key schedule comprises an expanded key schedule according to the Advanced Encryption Standard (AES) algorithm.
26. (Currently Amended) The method as recited in claim 22, wherein said ~~receiving~~ fetching comprises:  
prescribing the cryptographic instruction according to the instruction format for execution on an x86-compatible microprocessor.
